

This Week

1. Continued running parameter tests to fine tune the model--ran ~40 different combinations of patience, # epochs, and learning rate to slightly disappointing results
2. Successfully downloaded and ran the ACGAN code
3. Attended graduate school workshop and found it very informative and well put together.

Next Week

1. A few more attempts at stretching our data.
2. Should #1 fail, relabeling and repurposing the NTURGBD dataset by freezing & loading the model.

Future

1. Continue meeting with Dr. Khan, Alex, Joe, Meghan to help decide further progress for the project.
